

1. panel redundante en arbol.

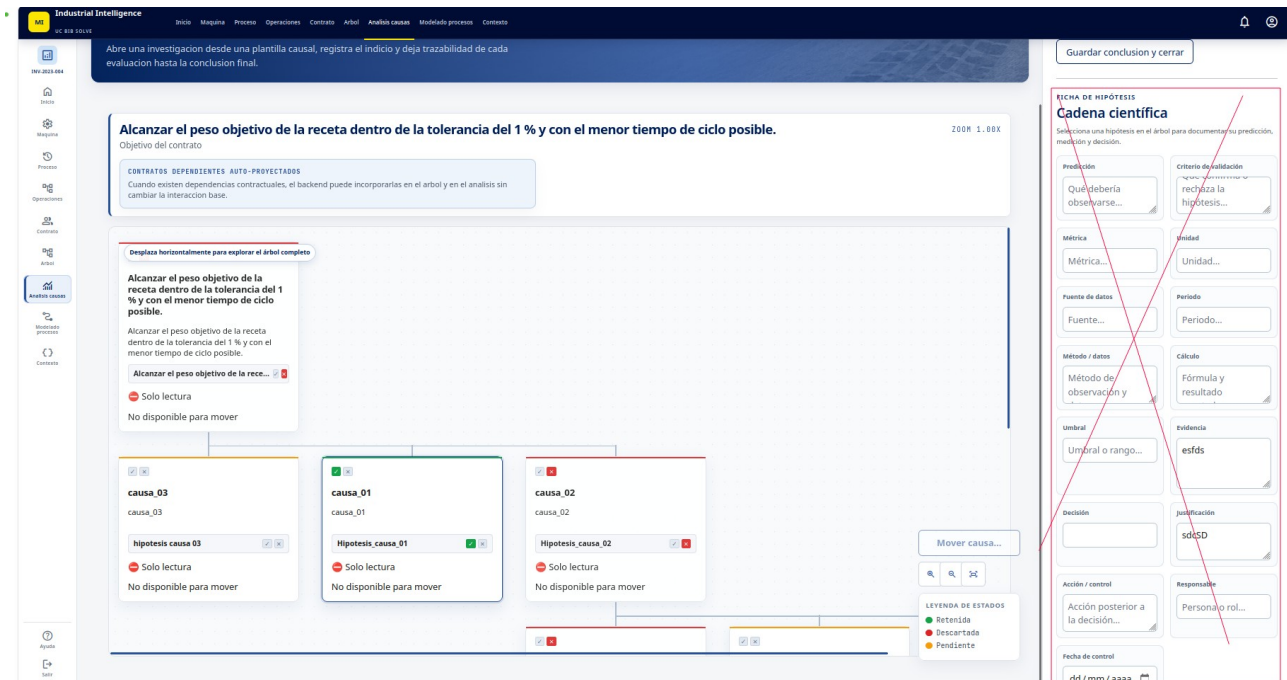

Eliminar el panel señalado.

2. analisis.

1. Eliminar el panel ‘cadena científica’ y los modelos asociados sin romper otros elementos.

2. eliminar el simbolo de ‘solo lectura’

3. PROBLEMA GRAVE. Un análisis abierto, no me deja modificar los resultados de hipotesis. Tampoco es posible completar las hipotesis en un analisis nuevo.

The screenshot displays the 'Industrial Intelligence' software interface, specifically the 'Analisis causas' (Cause Analysis) module. The main workspace shows a workflow diagram with several nodes. The first node is 'CAUSA_02_01', which has a sub-node 'hipotesis_causa_02_01'. This node is marked as 'Solo lectura' (Read-only) and 'No disponible para mover' (Not available for moving). Below it is a node labeled 'causa de la causa', which contains two sub-nodes: 'hipotesis causa de la causa 2' and 'hipotesis causa de la causa', both marked as 'Solo lectura' and 'No disponible para mover'. To the right of the main workspace is a 'Detalle del nodo' (Node Detail) panel for 'causa_02_01'. This panel shows various metadata fields: 'Categoria' (Causa), 'Responsable' (No registrado), 'Proceso' (Preparación de productos químicos), and 'Objetivo' (Alcanzar el peso objetivo de la receta dentro de la tolerancia del 1 % y con el menor tiempo de ciclo posible). Below these fields is an 'Evaluacion' (Evaluation) section with a note: 'Los metadatos de la plantilla son solo lectura. Usa el panel de trazabilidad para validar o rechazar.' (Template metadata is read-only. Use the traceability panel to validate or reject). The 'Hipotesis' (Hypothesis) section shows 'Hipotesis_causa_02_01' with a 'Criterio de validación' (Validation criterion) and a 'Método de cálculo' (Calculation method). At the bottom of the panel are 'OK' and 'NO OK' buttons. The interface also includes a top navigation bar with various icons and a left sidebar with a list of icons.
